

IN THE SPECIFICATION

Please amend the paragraph starting at page 7, line 16 as follows:

The interferometer 40 preferably has the delay loop 46, which may be a long section of optical fiber for example 3 feet long. The loop may be coiled depending upon its bending capability, and retained in the coil with a fastening device such as spindle 47, which may for example be made of plastic. Loop 46 also may extend around the perimeter of card 1, so as to gain greater length, but is preferably retained with a fastening device such as clips or in some similar fashion.
